## EXPERIENCE

---

### CoStar Group

Boston, MA

#### Quantitative Analyst

June 2025 - Present

- Owned quarterly production releases for commercial real estate credit risk forecasting models, analyzing large loan-level datasets to monitor performance, identify trends, and inform model and portfolio decisions.
- Developed Python-based validation workflows and conducted attribution, sensitivity, and stress testing analyses to investigate model behavior across market and economic scenarios.
- Led release readiness with developers and market analysts by reviewing Git-based code changes, resolving data and logic issues, and streamlining recurring QA and documentation with AI coding tools.
- Translated model results, performance trends, and scenario-driven changes into clear insights and recommendations for model owners and business stakeholders.

### Guidehouse

McLean, VA

#### Data Scientist / Consultant

March 2024 - June 2025

- Built Python and SQL analytical workflows across large, multi-source federal financial datasets, improving recurring performance monitoring and reducing a reconciliation and reporting process from one week to under one day.
- Evaluated a user-facing Azure AI Search and retrieval-augmented generation workflow using quality criteria for retrieval consistency, prompt behavior, output reliability, and usability.
- Identified data and workflow issues, investigated root causes, and translated analytical findings and user requirements into actionable recommendations for client and technical stakeholders.
- Developed evaluation criteria for failure modes, quality limitations, and implementation readiness to inform AI workflow design, deployment, and ongoing evaluation.

### Federal Reserve Board of Governors, Division of International Finance

Washington, DC

#### Graduate Intern, Integrated Technology Solutions

May 2023 - August 2023

- Contributed to early GenAI product exploration by gathering user requirements, evaluating prompts and outputs, and translating research needs into product and workflow recommendations.
- Built R-based visualizations and reproducible analytical workflows for macroeconomic research teams, improving the consistency and accessibility of recurring research outputs.

## PROJECTS

---

### Product Experimentation & Metrics Analysis | Python · pandas · scipy · statsmodels

- Designed and evaluated a simulated feed-ranking A/B test using 7-day retention as the North Star metric, with SRM checks, power and MDE analysis, CUPED variance reduction, and engagement guardrails.
- Analyzed segment-level treatment effects and retention-engagement tradeoffs, translating results into a data-driven launch recommendation and post-launch monitoring plan.

### Commercial Real Estate Stress Testing Pipeline | Python · pandas · scikit-learn · Power BI

- Integrated macroeconomic, mobility, and property-related datasets to develop and evaluate a classification model achieving approximately 78% recall, FPR  $\leq 20\%$ , and 0.73 AUC.
- Analyzed feature importance and model tradeoffs, and translated results into a non-technical Power BI dashboard for scenario-based decision support.

## EDUCATION

---

University of Pennsylvania — Master of Applied Science in Computer Science

Expected 2028

University of Maryland — Master of Science in Business Analytics, GPA 3.7

December 2023

Waseda University — Bachelor of Arts in Global Political Economy, GPA 3.7

September 2022

## SKILLS

---

**Technical:** Python, SQL, R, Power BI, Azure, Git

**Analytics:** Product experimentation, A/B testing, metric design, variance reduction, statistical analysis

**AI:** RAG evaluation, prompt and output analysis, AI-assisted workflow optimization
