SUMMARY Applied AI builder and quantitative analyst with experience developing LLM-powered tools and automations for model review and analytical processes. Strong foundation in Python, SQL, model validation, and translating business requirements into practical technical solutions.

EXPERIENCE

CoStar Group, Risk Analytics

Boston, MA

Quantitative Analyst

June 2025 - Present

- Owned quarterly production releases for commercial real estate credit risk forecasting models, analyzing loan-level datasets, validating outputs, and coordinating release readiness across developers and market analysts.
- Built a proof-of-concept LLM QA agent and dashboard to support model-monitoring reviews, flag anomalies, surface supporting evidence, and structure findings for analyst verification.
- Developed Python-based validation and workflow automation tools for attribution, sensitivity, and stress testing analyses across market and economic scenarios.
- Reviewed Git-based code changes, resolved data and logic issues, and translated validation findings into model and workflow improvements.

Guidehouse

McLean, VA

Data Scientist / Consultant

March 2024 - June 2025

- Built Python and SQL analytical workflows across large federal financial datasets, reducing a recurring reconciliation and reporting process from one week to under one day.
- Evaluated an enterprise RAG system using Azure AI Search, assessing retrieval consistency, prompt behavior, output reliability, and usability for policy-document research.
- Prototyped LLM-assisted workflows using Python, LangChain, and LangGraph, documented failure modes, and translated user requirements into implementation and evaluation criteria.

Federal Reserve Board of Governors, Division of International Finance

Washington, DC

Graduate Intern, Integrated Technology Solutions

May 2023 - August 2023

- Supported data science and application development within the International Finance division, contributing to research tools, macroeconomic data workflows, and workflow automation initiatives.
- Conducted prompt experimentation and NLP-based document analysis to support economic and regulatory research in a policy environment.

SHIPPED GENAI / LLM SOLUTIONS

Agentic AI Evaluation Platform | [GitHub Repo](#)

- Built a reproducible LLM QA evaluation platform that analyzes synthetic model-monitoring scenarios, generates schema-constrained findings, and supports evidence-grounded human review.
- Developed a reviewer-agent and evaluation framework covering precision, recall, calibration, unsupported claims, failure modes, and rule-agent comparisons.
- Created a Streamlit dashboard for case review, experiment comparison, failure analysis, and human-review tracking.

CardNews AI | [GitHub Repo](#)

- Built a Claude-powered CLI workflow that transforms a user-provided topic into a structured 10-slide visual briefing.
- Generated schema-constrained slide content through the Anthropic API and automated HTML/CSS-to-PNG rendering with Puppeteer, producing reproducible JSON and image artifacts for human review.

EDUCATION

University of Pennsylvania — Master of Applied Science in Computer Science

In Progress

University of Maryland — Master of Science in Business Analytics, GPA 3.7

December 2023

Waseda University — Bachelor of Arts in Global Political Economy, GPA 3.7

September 2022

SKILLS

Python, SQL, Streamlit, Azure AI Search, LLM evaluation, RAG evaluation, agent workflows, workflow automation, model validation
