SUMMARY AI Evaluation & Risk Analytics Specialist with a unique intersection of advanced quantitative credit risk forecasting and generative AI framework design.

EXPERIENCE

CoStar Group

Boston, MA

Quantitative Analyst

June 2025 - Present

- Spearheaded quarterly production releases for credit risk models, analyzing large loan-level datasets to optimize portfolio decisions and ensure integrity.
- Engineered a PoC for an LLM QA agent and dashboard, automating anomaly detection and surfacing grounded context to streamline risk validation pipelines.
- Developed Python validation frameworks and executed multi-scenario stress testing, sensitivity, and attribution analyses to benchmark model resilience.
- Led cross-functional release readiness by auditing Git code changes, resolving logic bottlenecks, and validating end-to-end model outputs with engineering.

Guidehouse

McLean, VA

Data Scientist / Consultant

March 2024 - June 2025

- Automated Python/SQL analytical workflows across federal financial datasets, reducing a recurring reconciliation cycle from 7 days to under 24 hours.
- Architected an evaluation framework for enterprise RAG systems via Azure AI Search, benchmarking prompt mechanics and retrieval consistency.
- Diagnosed LLM failure modes and limitations, translating user requirements into technical benchmarks and criteria for AI-assisted workflows.

Federal Reserve Board of Governors, Division of International Finance

Washington, DC

Graduate Intern, Integrated Technology Solutions

May 2023 - August 2023

- Advanced data science and early GenAI/NLP pipelines to optimize macroeconomic data workflows and research instrumentation.
- Designed prompt engineering methodologies and deployed NLP semantic document analysis to accelerate economic and regulatory policy research.

PROJECTS

Agentic AI Evaluation & Monitoring Platform | Python · LLM APIs · Streamlit

- Developed an adversarial evaluation platform using synthetic model-failure datasets to stress-test LLM workflows and ensure grounded outputs.
- Designed a validation dashboard benchmarking precision, recall, and confidence to map hallucination patterns and optimize reviewer decisions.

Product Experimentation & Metrics Analysis | Python · pandas · scipy · statsmodels

- Spearheaded a simulated feed-ranking A/B test (7-day retention), integrating SRM checks, power/MDE analysis, and CUPED variance reduction.
- Analyzed segment-level treatment effects and trade-offs, translating statistical insights into data-driven launch and monitoring plans.

EDUCATION

University of Pennsylvania — Master of Applied Science in Computer Science

In Progress

University of Maryland — Master of Science in Business Analytics, GPA 3.7

December 2023

Waseda University — Bachelor of Arts in Global Political Economy, GPA 3.7

September 2022

SKILLS

AI & LLM Core: LLM & RAG Evaluation, Agentic Workflows (LangChain, LangGraph), Prompt Engineering, Synthetic Data Generation, Human-in-the-loop Systems, Retrieval Quality Analysis, AI Trust & Safety

Data & Analytics: Statistical Analysis, A/B Testing & Experimentation, Metric Design, Forecasting, Quant Model Validation, Stress Testing, Python, SQL, R, Azure, Git, Streamlit
